

Stand concept / Supra

DESIGNED BY NOTE (DESIGN STUDIO)

This installation dynamically interacts with imposing metal structures embracing a repetition of chair shells from the new Supra Raw collection, made of translucent polypropylene as the main element. These imposing structures modulate circulation, creating different spaces and textures; not as static and isolated objects, but as dynamic elements that interact with the monochromatic environment surrounding them, generating open spaces and shapes in constant transformation.

Tam Concept

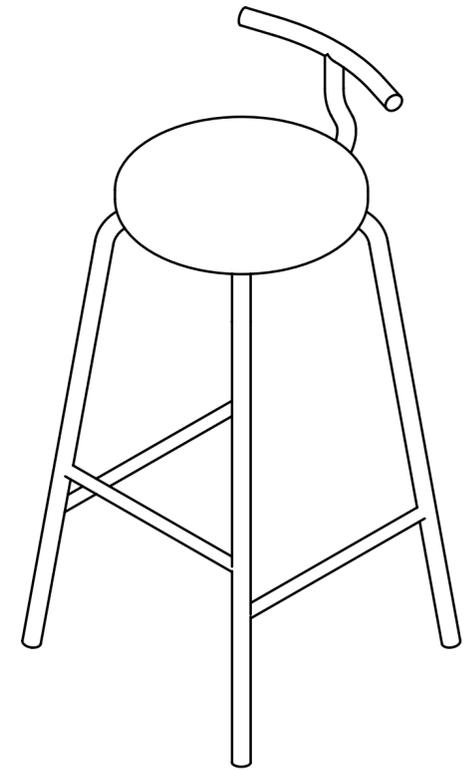

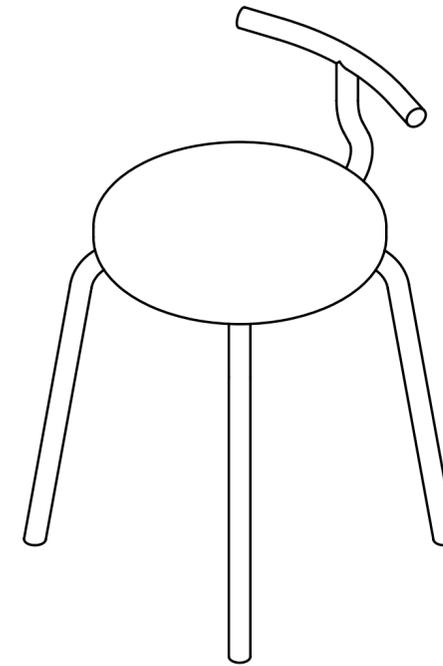

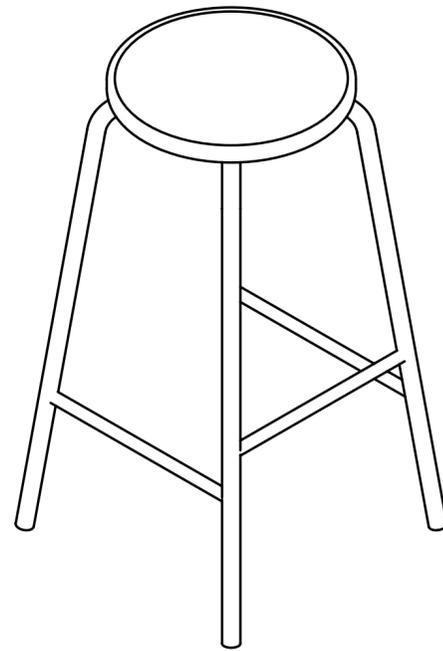

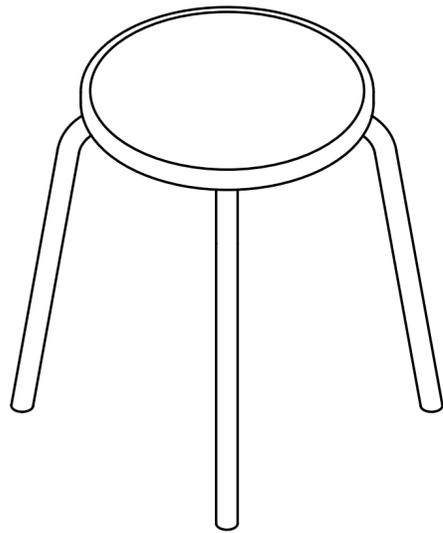

DESIGNED BY NAHTRANG

Tam Stool

DESIGNED BY NAHTRANG

Stool H45, H65 and H75 with Steel or Wood structure + Swivel stool with steel structure.

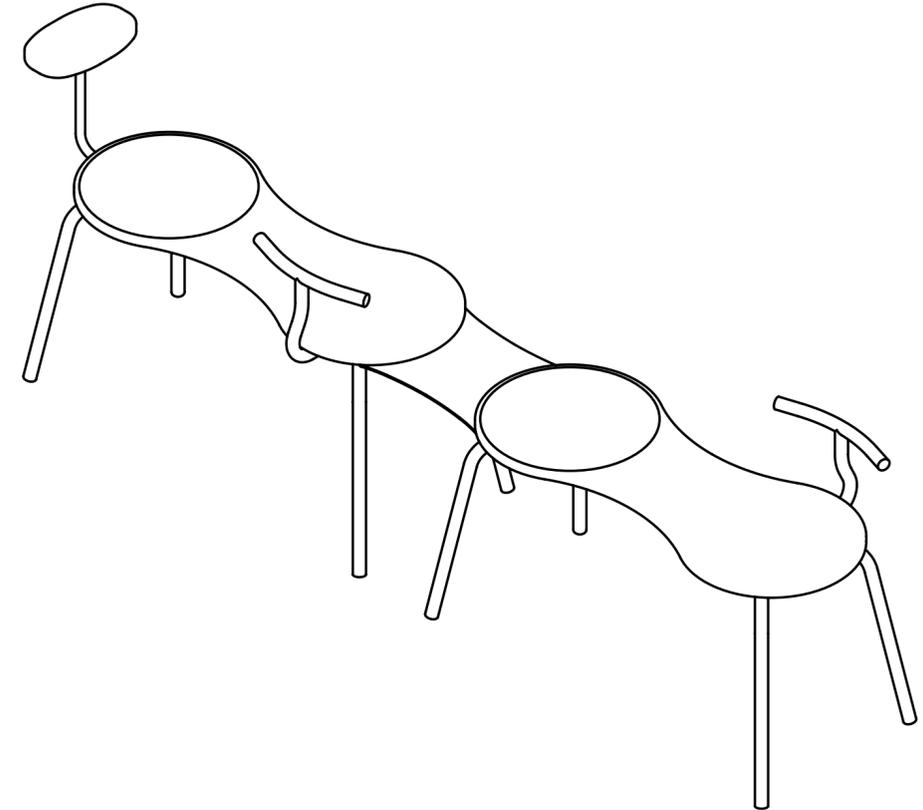

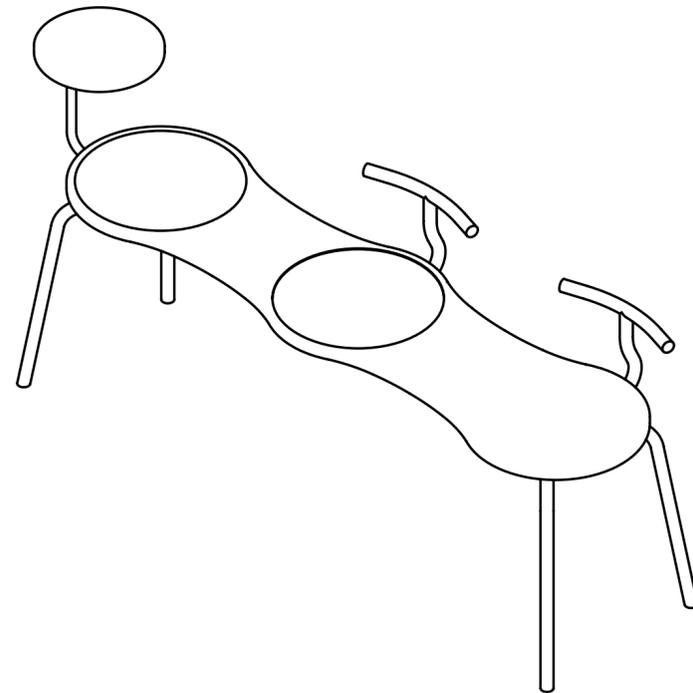

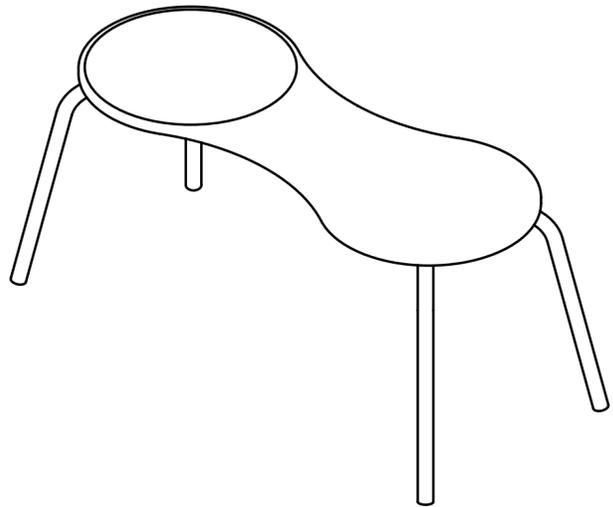

ACCESSORIES / NOTES:

- Steel backrest. Is it sufficient? Do we need to offer a cover option? (option being studied)
- Footrest in stainless steel. Only for steel structure. Is it interesting?
- Seat pad. Is it comfortable? Is a fully upholstered version necessary? (option being studied)
- Is the stacking option for stools of interest?

Tam Bench

DESIGNED BY NAHTRANG

Double & triple with Steel or Wood structure.

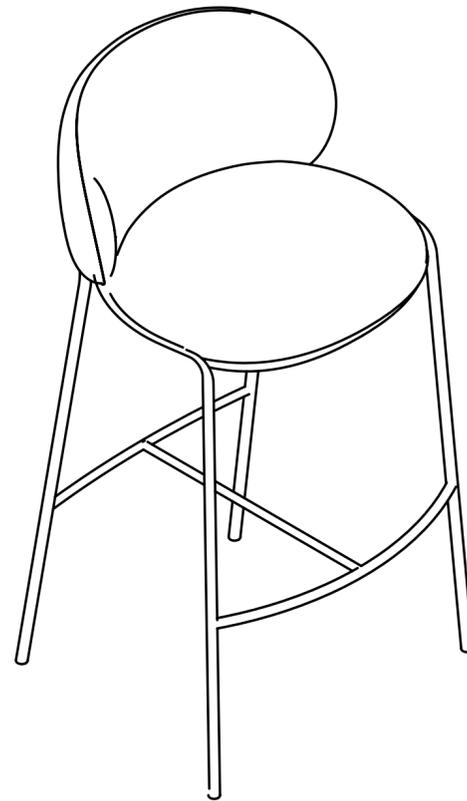

ACCESSORIES / NOTES:

- Steel backrest same as for stools
- Seat pad similar as for stools but bigger
- Linking piece. Is it perceived as a small table? Can we make it smaller?
- Armrest
- Swivel table. Do people like it? Are the shape and dimensions appropriate?
- Electrification (1 Schucko + 2 USB C). Is one power outlet per bench (double or triple) sufficient?
- Is a floor-fastening piece interesting? (option being studied)

Ginger Stool

DESIGNED BY SEBASTIAN HEIMLER

H65 & H75 - Epoxy frame with an upholstered, polyurethane-injected seat and backrest (removable upholstery, no glue).

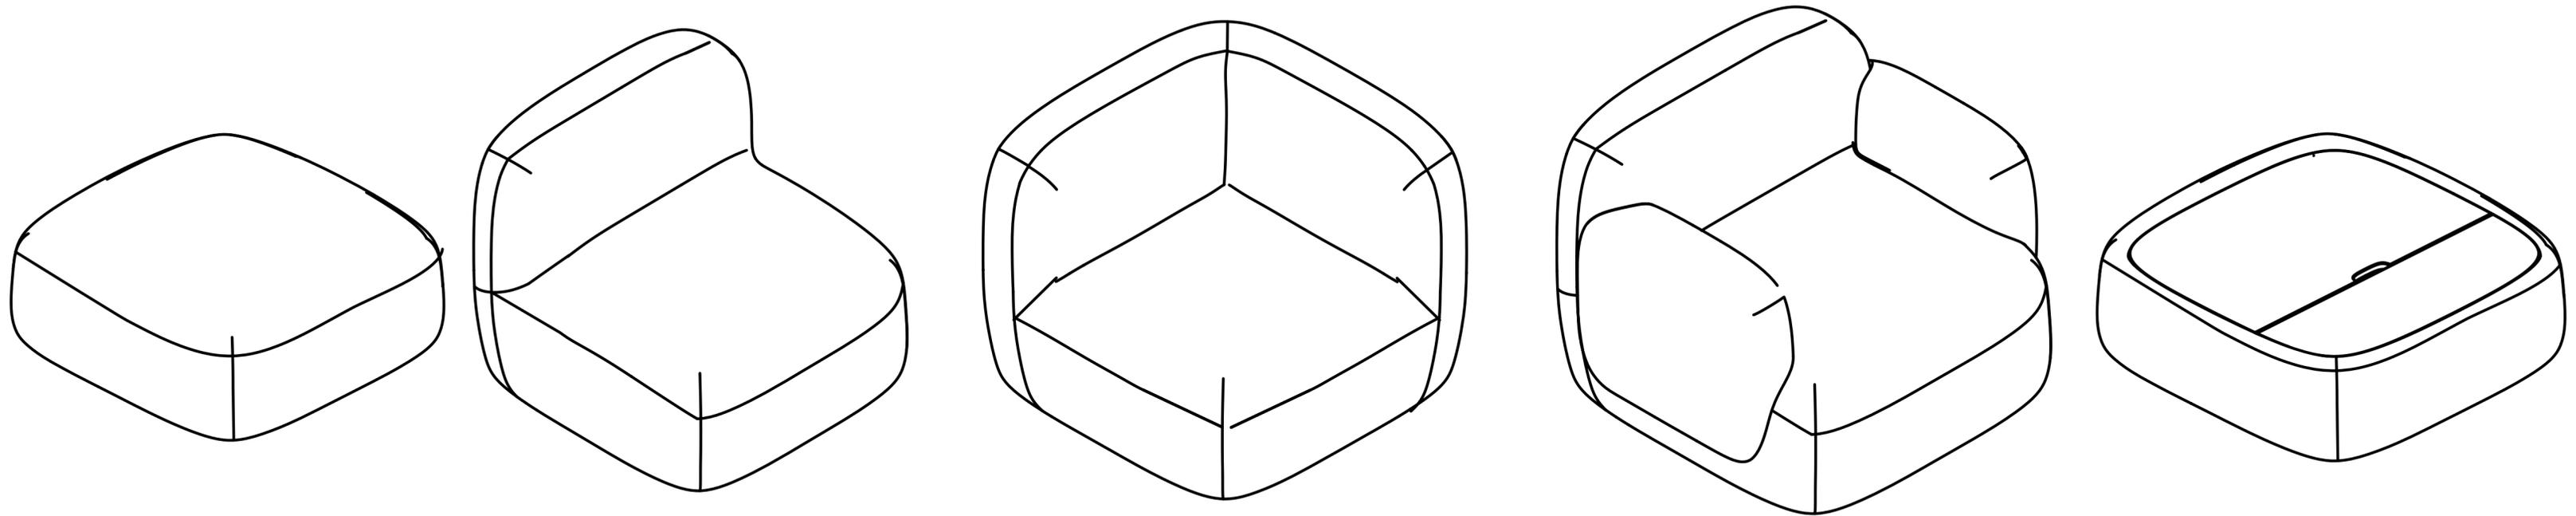

ACCESSORIES / NOTES:

- We are working on ergonomics. What do people think about the seating?
- The fair stools are H75; how do they feel about the height?
- Is there interest in a footrest protector or other accessories?

Gumi Sofas

DESIGNED BY MADE STUDIO

This collection consists of five different modules that allow for infinite configuration possibilities: central module, corner module, pouf, module with armrests, and table.

NOTES:

- Is it necessary for the product to have wheels?
- Side table: What do they think about it? The electrification? The geometry?
- Armrest: does it have potential?
- Gumi Table: What use could it have? Does it make sense?
- Module connection by straps. The ones at the fair don't have it, but we are bringing a sample.

Thank
you!
